## **Whisper Crack + X64**

Whisper is a secure, but simple, messaging app, perfect for private communications. With Whisper you can write messages to selected recipients, and then receive messages that only the recipients can access. Additional Info: - Write down your message and send it to the recipients - Receive messages only the recipients can access - Send messages to multiple recipients at the same time (multiple messages supported) - "Who can see this message?": Only add a recipient to this group if you want the group to read the message. Whisper Review: Whisper is a simple messaging app that allows you to share your text messages with select groups of people. Developed by Swedish indie developer High. Insight: Whisper is easy to use, but limited in features. You can add a message, make it accessible only to specific groups of people, and you can set it to expire at a certain date and time. Unfortunately, the app lacks some of the features of a messaging service. To make it work, your Whisper message needs to be publicly accessible through the web. This means that anyone else can see and read your message, even if the recipient cannot access it. As such, Whisper's security model is far from ideal for those who seek a high level of security or privacy. Full Review: Whisper \_\_\_\_\_ Want to find out more about Google Play app testing? It is hard to give a 10/10 rating when there are no negative reviews. I like it, I think it is a great idea that I would use if I had to communicate with a small group of people. The only problem with it, is that there is no option for me to add a group of specific people so I can share with them a message. I just tried Whisper a couple of minutes ago and it looks pretty good. It is the most slick and easy to use app I have seen so far. The only issue I found was that the audio for my message is recorded on my device and saved as a local file, which is probably a privacy issue. Nevertheless Whisper is a nice app that deserves a try. First of all, I can not comment from a technical standpoint, but I like it, it seems to be easy to use. And for the developers, congratulations
